

R DHANUSH

Software Engineer | Backend Developer | AI Product Builder | Cloud Enthusiast

Bangalore | dhanush26kkrtrd@gmail.com | LinkedIn - [R Dhanush Devanga](#) | Ph : 8792035854

ABOUT ME

Software Engineer focused on backend development, cloud-native applications, AI-powered products, and scalable system design. Experienced in building full-stack applications, REST APIs, real-time data systems, and cloud-deployed solutions using Python, Java, AWS, Supabase, and modern development frameworks.

TECHNICAL SKILLS

- **Languages** - Java, Python, SQL, C
- **Backend** - Spring Boot, REST APIs, JWT Authentication, Maven
- **Databases** - PostgreSQL, MySQL, SQL, Database Design, Normalization
- **Cloud** - AWS, Elastic Beanstalk, EC2, S3, IAM
- **Dev Tools** - Git, GitHub, Docker, GitHub Actions, Postman
- **AI / ML** - Scikit-Learn, CNN, NLP, MATLAB, OpenAI APIs, LLM Integration
- **Frontend** - React, HTML, CSS, JavaScript, TypeScript
- **Core CS** - Data Structures & Algorithms, DBMS, Operating Systems, OOP, Computer Networks

PROJECTS

Contract Shield

June 2026 - Present

- Building an AI-driven automation tool using LLM APIs for code generation, debugging, and developer task assistance
- Integrating OpenAI and agent-based workflows to enable intelligent automation and decision support
- Evaluating & refining AI-generated outputs using prompt engineering techniques to improve response accuracy and performance

Highlights:

- Detects API schema-breaking changes automatically, Stress-tests APIs using adversarial inputs, Generates regression reports, CI/CD integration, API version validation

WhatsApp Clone – Full-Stack Messaging Application

Jan 2026 – May 2026

- Built a full-stack real-time messaging platform using React.js, Node.js, Express, and PostgreSQL with JWT authentication, supporting text, voice, and image messaging via Socket.io WebSockets, live voice/video calling using LiveKit (WebRTC), and deployed on Replit with CI/CD via GitHub
- Designed and integrated RESTful APIs for user registration, conversation management, and message retrieval with base64 media storage in PostgreSQL, implementing CORS policies, 50MB payload handling, and environment-based configuration for production reliability
- Built a responsive UI with dark/light mode, custom wallpapers, real-time online presence, voice recording, image sharing, show/hide password, and live input validation, ensuring a seamless cross-device experience
- Implemented reCAPTCHA, account lockout, rate limiting, and JWT session versioning to secure authentication against brute-force and bot attacks

AI-Powered Vehicle Health Monitoring & Predictive Maintenance System

Feb 2025 - Feb 2026

- Built a data-driven system using Python and IoT data to analyze real-time vehicle performance, including engine health and fuel efficiency through an interactive dashboard
- Validated real-time IoT data and AI outputs to ensure accuracy and reliability in predictive maintenance decisions
- Designed workflow-based alert systems to enable automated decision-making and improve system reliability

Plant Disease Detection using CNN (MATLAB)

Jan 2025 - Mar 2025

- Developed a CNN-based plant disease detection system using MATLAB and image processing techniques.
- Built a user-friendly MATLAB application for disease classification and result visualization.
- Integrated ThingSpeak for remote monitoring and smart agriculture data tracking.

Business Website & Digital Growth System for Pet Boarding Service (Client Project)

Jan 2025 - Mar 2025

- Developed a full-stack website with Supabase backend, enabling booking management and structured content handling
- Implemented an online booking system with data tracking, increasing revenue by 120% through data-driven workflows
- Scaled digital presence via SEO optimization and 12-week Google Ads campaigns, and boosted Instagram engagement by 73% using reels and Meta Ads

CERTIFICATIONS & SIMULATIONS

AWS APAC Solutions Architecture virtual experience program on Forage - July 2025

Designed scalable cloud architecture using Elastic Beanstalk

Tata GenAI Data Analytics Job Simulation on Forage - July 2025

Performed EDA and built predictive insights using AI tools

Deloitte Cyber Security Job Simulation on Forage - July 2025

Identified security vulnerabilities and applied cybersecurity best practices for risk mitigation.

Deloitte Technology Job Simulation on Forage - July 2025

Analyzed technology requirements and proposed digital solutions for business challenges.

Linux Shell Programming (Infosys Springboard) - July 2025

Developed shell scripts and automated system tasks using Linux command-line tools.

EDUCATION

Dayananda Sagar University (Present) - 6.25 GPA

Jan 2022 - May 2026

- Pursuing B.Tech in Computer Science (4rd Year)
- Actively participated in college events and leadership activities

Dayananda Sagar PU

Mar 2020 - Nov 2022

- Completed my +2 course in PCMCs

PROFILES

- [GitHub](#)
- [Leetcode](#)
- [GeeksforGeeks](#)

ACHIEVEMENTS & RECOGNITION

- **Published Patent:** AI-Powered Vehicle Health Monitoring & Predictive Maintenance System using IoT Sensors(Patent Application no. 202641048002)
- Developed an intelligent vehicle monitoring solution leveraging IoT sensors, real-time data processing, and predictive analytics for proactive maintenance recommendations.
- Built and deployed many software engineering, AI, and cloud-based projects.
- Delivered a client platform that contributed to a 120% increase in business growth through automation and digital optimization.
